combat global warming,  
reduce the  
production of greenhouse gases,  
and build a  
stronger infrastructure.

## SPECIFY FLY ASH

(a recovered resource)

### as a replacement for cement in concrete.

When you specify fly ash as replacement for cement in concrete, you help reduce CO<sub>2</sub> emissions from cement production, conserve landfill space, and decrease water usage. You also enhance workability and chemical attack resistance, increase strength and produce more durable concrete.

Contact Headwaters Resources for free technical literature and information on how fly ash use benefits the environment and produces better concrete.
